Interphase — Prototype Briefing v4

For: Claude Code

Output: iPhone-optimised progressive web app (single HTML file)

Purpose: Investor demo · Design partner conversations · Question engine test

Core focus: The Nucleus — live reflection conversation with speech + streaming

---

What you are building

A working iPhone webapp that demonstrates the Interphase reflection experience. The centrepiece is a real, live AI conversation powered by the Claude API — with full speech support and streaming responses. The user can speak or type. Interphase streams its response word by word on screen, and begins speaking aloud as soon as the first complete sentence arrives — without waiting for the full response.

The result: the conversation feels alive. The question builds on screen while the voice is already beginning. Perceived latency is near-zero even though network time is identical.

Architecture

```
Screen 1: Onboarding (2 cards, ~60 seconds)
    ↓
Screen 2: Nucleus — streaming reflection conversation  ← THE PRODUCT
    (speech input + text input, Interphase streams + speaks)
    ↓
Screen 3: Chaperone panel (slide-up, simulated data)
```

Brand & design system

Identity

- Product name: **Interphase**
- Tagline: **"change begins before it shows"**
- Mark: enso circle with off-centre dot — inline SVG
- Philosophy: the platform asks questions, never gives answers
